

Mother's Day

Last Sunday was Mother's Day. I spent the day with my mum and dad. Dad and I wanted to bring a big surprise to mum. We hoped mum to have a wonderful day filled with love, laughter and joy.

First, dad wanted to make a cake on his own, but he failed because the cake was over-cooked. Therefore, he needed to buy a cake. Then, I wanted to decorate the house by putting up colourful balloons. I made the house messy, so I needed to clean it. We finally finished making a cheese hamburger for mum's breakfast. We were so tired.

At last, mum said the breakfast was wonderful. She felt very joyful. We felt satisfied because mum felt happy. Although it was a tiring day, I felt it unforgettable. I was grateful for mum's dedication to our sweet home. I love my mum.

Sai Kung Mangrove

Yesterday, me and my classmates went to Sai Kung Mangrove. At the start, I was on cloud nine because we seldom go on field trips.

After we arrived, we saw new things, such as loose mud instead of concrete floors, flowing rivers instead of shops, majestic plants instead of boring buildings. At first, me and some other classmates started looking at the mangroves. The teacher assigned us to identify and measure the mangroves. Later, we needed to find out the salinity and PH value of the river water. Last but not least, we spotted some unique animals, such as fiddler, crabs and seashore slugs.

However, the best "gift" of all was me and my classmates bonding through this adventure to the Sai Kung Mangrove.

I loved being able to find and look at more exotic animals because I could see the special creations of Mother Nature. I felt exhausted but still over the moon after this trip.

Sai Kung Mangrove

Last month, during our science lesson, our teacher, Mr Cheng told us that we would have a field trip to Sai Kung Mangrove. On that day, my classmates and I were excited. It was a sunny and windy day.

First, we went there by school bus. When we arrived there, Mr Cheng told us not to harm the environment. Then, we used Salinity Meter to measure the water and found that the water was not as salty as sea water. Next, we started observing mangrove. We found mudskippers, crabs and kandelia obovata, but we couldn't find any shells. I was happy because I could feel and touch the environment which we cannot experience in class.

Before leaving, we picked up some trash, like plastic bags and bottles. I learnt that we need to protect the environment and I felt glad because I could see different animals and plants, which we couldn't see in the zoo, like egret and kandelia. After the trip, I felt tired but happy, because I had learnt more about the nature.

Mother's Day

When I woke up in the break of dawn, I could feel the warmth of the sun, shining brilliant rays of light. I looked at my calendar and guess that day it is? It's Mother's Day! I pranced in joy while thinking about all kinds of ideas to surprise my mum.

I decided to cook for my mom today, and out of the millions of scrumptious dishes, I decided to cook my mom's favourite dish - spicy lobster. Yet I had no experience in my entire life. I felt anxious looking at the precious lobster, knowing that I couldn't waste such luxurious ingredients, but I still tried my best.

I first poured water in a pot, but just as I was ready to boil it, I remembered I had to unalive the lobster first. I raised the butcher knife and cut the lobster's head. I put the dead lobster in the pot of near boiling water and took it out a couple of minutes later. I sprinkled some chili powder on it and added a drizzle of lemon juice.

When it was lunch time, I served my "masterpiece" on the dining table. We all took a bite and my mother praised it delicious.

I learnt that even though things might go south, we should still make the best of it. In a nutshell, we should always try our best.

Sai Kung Mangrove

Last month, I went to Sai Kung Mangrove with classmates and teachers, I felt happy and thrilled at the start of the trip.

After we arrived, we started making groups. After that, we started observing a special mangrove that can be found in most of the wet lands. It was called "Kandelia Obovata". Its seeds were chili shaped but not normal sized. They are about 20 cm tall. The mangrove also had prop roots. These roots can fix the mangrove firmly in the wet and loose soil. After we finished observing the mangrove, the teacher told us to find some animals. We found some fish, mudskippers, barnacles, seashore slugs, fiddler crabs, spiral shells and hermit crabs. Some were resting, some were playing with each other, some were also finding food.

One hour passed, we started to leave. On the way home, I felt more connected to nature. I also felt lucky because I had a chance to see the amazing animals.
